

Step1

High Power Wireless-N 600mW Gigabit Dual Band Router

Disconnect and Power Off your Existing Router (If you have one)

Disconnect your existing router from your computer, your broadband modem and its power outlet. If you do not have an existing router please continue to Step 2.

Step2

Power Off your Modem

Power off the modem by disconnecting the modem's power adapter from the power outlet. If your modem has a backup battery, remove the backup battery from your modem.

Do NOT power on your modem until Step 4.

Step3

Connect the High Power Router to your Modem

- Use the included blue Ethernet cable and connect one end of the cable to your modem.
- Connect the other end of the cable to the WAN port on the High Power Router.

Do NOT connect the power adapter to the High Power Router at this time.

Step4

Power On your Modem

Plug in the power adapter and reinsert the backup battery (if available) to power on the modem.

Allow a minute or two for the modem to initiate.

Step5

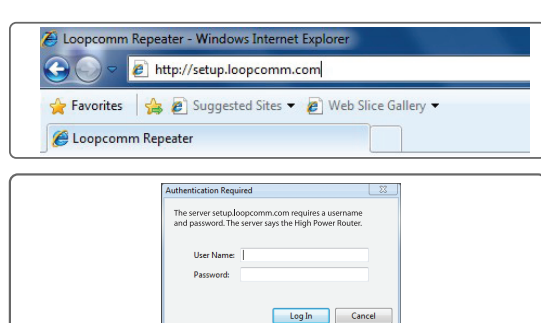

Power On the High Power Router and Connect it to your Computer

- Attach the two included Antennas.
- Connect the included grey Ethernet cable to an available network port on your computer.
- Attach the Power Adapter to the High Power Router's **PWR** port and a power outlet.

Step6

Open your Web Browser

Enter the setup web address into your browser:

http:// setup.loopcomm.com

If the URL fails to open, then try: <http://192.168.3.1>

When prompted, enter the login and password:

LOGIN: admin
PASSWORD: admin

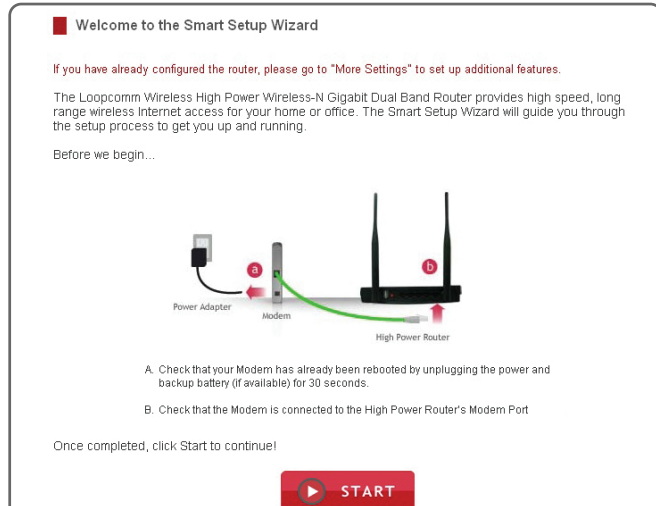

IF YOU HAVE PROBLEMS ACCESSING THE WEB MENU...

Disable any third party firewalls that your computer may have on (e.g., Norton/ZoneAlarm/Windows Defender). Check to see that your computer is NOT connected to any wireless networks.

Accessing the setup menu does not require Internet access. The menu is served from the Router.

Step7

Welcome to the Smart Setup Wizard

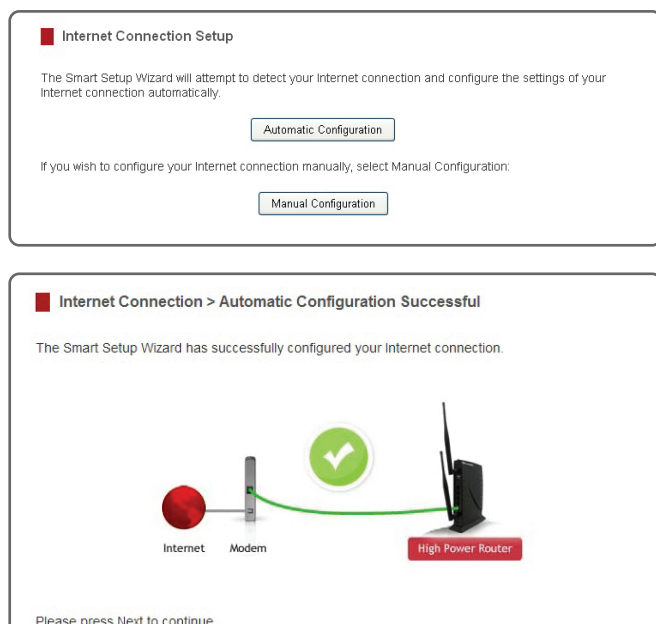

The Smart Setup Wizard will guide you through the following settings:

- Internet Connection Settings
- System Clock
- Wireless Settings

Click **Start** to begin.

Step8

Configure your Internet Connection

Automatically configure your Internet settings by clicking on Automatic Configuration.

More advanced users may choose to configure their connection manually by selecting Manual Configuration.

If your Internet provider requires that you login before accessing the Internet, you will need to do so under Manual Configuration.

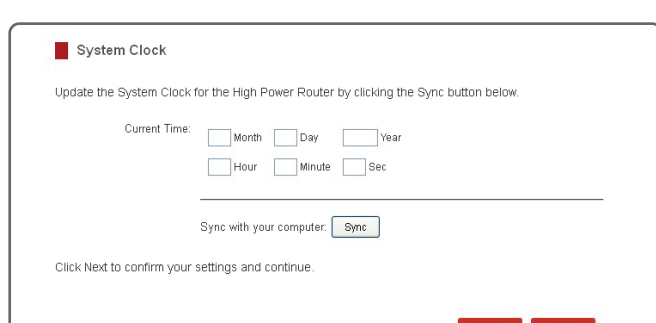

If there is a problem with the Automatic Configuration, the wizard will notify you of the issue.

If the Automatic Configuration was successful, you will be directed to a Configuration Successful page.

Click **Next** to continue.

Step9

Set the System Clock

The System Clock is used for system logs and setting schedules for Internet access.

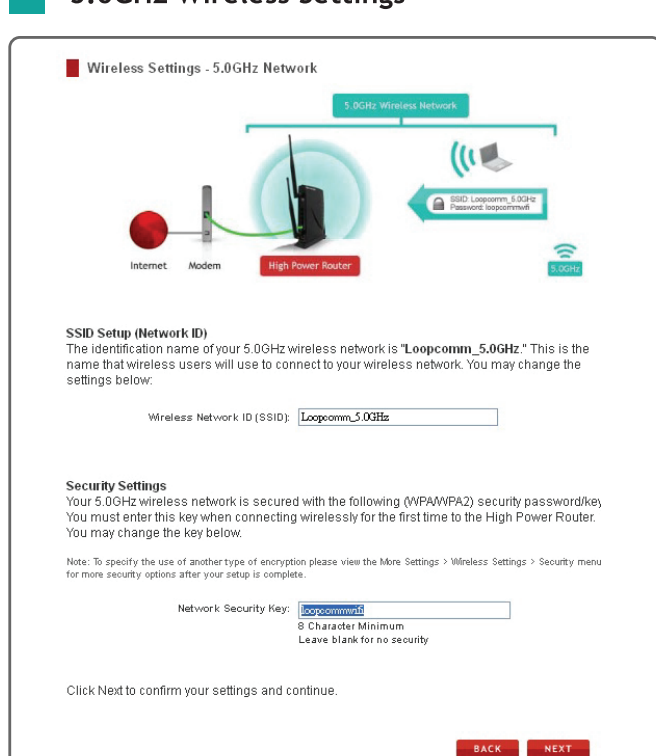

Click **Sync** to synchronize the System Clock with the time on your computer.

Click **Next** to continue.

Step10

Configure your Wireless and Security Settings

5.0GHz Wireless Settings

The default ID of your 5.0GHz wireless network is: **Loopcomm_5.0GHz**

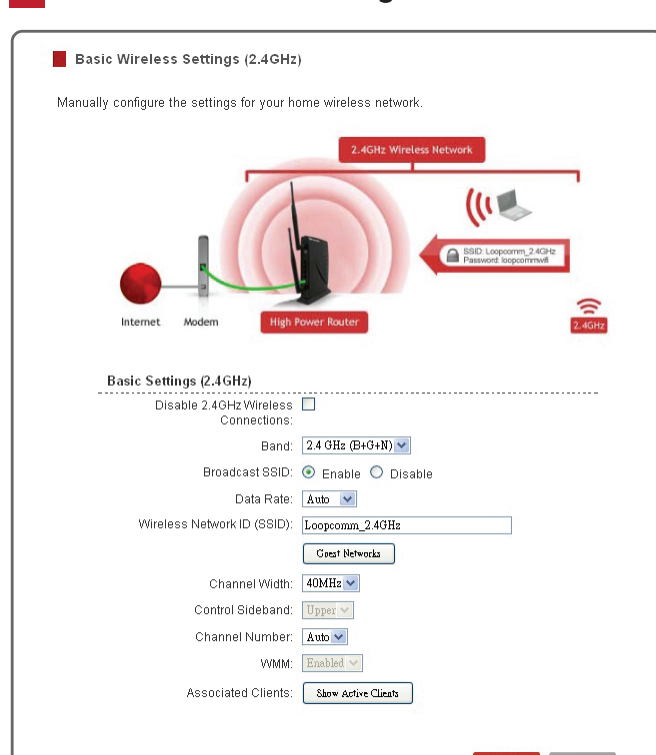

To change it, enter a new name in the SSID field. Users connecting wirelessly to the Router will use this ID to identify your 5.0GHz wireless network.

The default Security Key (WPA/WPA2) of your 5.0GHz wireless network is: **loopcommwifi**

To change it, enter a new key in the Security Key field. The key must be at least 8 characters long.

Click **Next** to apply your settings and continue with the settings for your 2.4GHz network.

2.4GHz Wireless Settings

The default ID of your 2.4GHz wireless network is: **Loopcomm_2.4GHz**

To change it, enter a new name in the SSID field. Users connecting wirelessly to the Router will use this ID to identify your 2.4GHz wireless network.

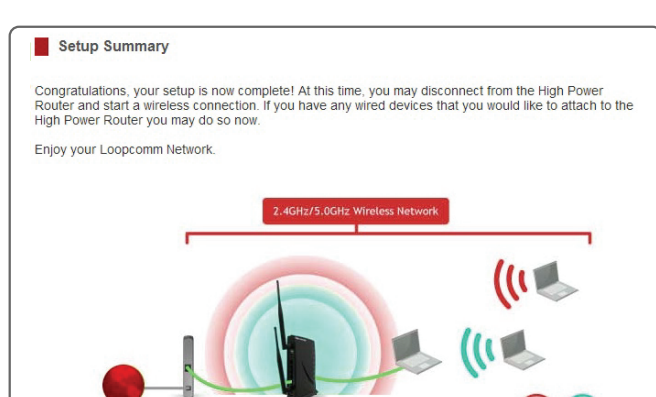

The default Security Key (WPA/WPA2) of your 2.4GHz wireless network is: **loopcommwifi**

To change it, enter a new key in the Security Key field. The key must be at least 8 characters long.

Click **Next** to apply your settings. The High Power Router will reboot. This process may take up to 1 minute. The page will automatically reload after the countdown. If it does not, you may need to refresh the page manually or check your connection to the router.

Step11

Setup Summary

Congratulations, the High Power Router is now successfully configured, and your settings are now saved. You may now connect additional devices directly to the 4 wired ports on the back panel, or connect wirelessly to the High Power Router.

LED Indicator Information

- Power:** Indicates when the High Power Router is powered on. The LED will remain on.
- 5.0GHz Wireless Activity:** Blinks rapidly when data traffic is transmitted or received over the 5.0GHz wireless network.
- 2.4GHz Wireless Activity:** Blinks rapidly when data traffic is transmitted or received over the 2.4GHz wireless network.
- Gigabit Wired Ports 1-4:** Indicates when a networking device is connected to a wired port on the back of the High Power Router. The LED blinks rapidly when wired data traffic is transmitted or received.
- Internet Connection:** Indicates when the High Power Router is connected to a broadband modem. The LED will blink rapidly when Internet traffic is transmitted or received.
- USB Connection:** Indicates when a USB storage device is connected to the USB port.
- WPS:** Wi-Fi Protected Setup activity. When the WPS mode is activated, the WPS LED blinks as it awaits a connection.

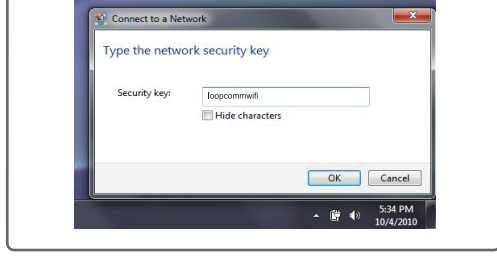

How to Connect Wirelessly to the High Power Router:

Windows 7 and Vista

A. Click on the Wireless icon to see available wireless networks (For Vista, click Start > Connect To). Select "**Loopcomm_2.4GHz**" or "**Loopcomm_5.0GHz**" network and click **Connect**.

B. When prompted, enter the wireless security key "**loopcommwifi**" and click **OK**.

Mac OS X

A. Click on the Wireless icon to see available wireless networks. Select "**Loopcomm_2.4GHz**" or "**Loopcomm_5.0GHz**" network.

B. When prompted, enter the wireless security key "**loopcommwifi**" and click **OK**.

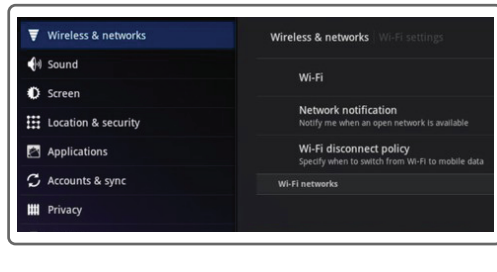

iPad Tablet

A. Tap the "Home" button to get to the home page.
B. Tap the "Settings" app icon.
C. Tap on Wi-Fi to enter the iPad's Wi-Fi settings.
D. Toggle the Wi-Fi "On/Off" selector switch to "On"
E. Under "Choose a Network," select:
"**Loopcomm_2.4GHz**" or "**Loopcomm_5.0GHz**"
F. When prompted, enter the wireless security key:
"**loopcommwifi**"

Android Tablet

A. Tap the "Apps" menu on the tablet screen.
B. Locate and tap the "Settings" app icon.
C. Under "Wireless & networks," tap "Wi-Fi settings"
D. Tap the Wi-Fi box to turn on Wi-Fi and scan.
E. Under "Wi-Fi networks," select:
"**Loopcomm_2.4GHz**" or "**Loopcomm_5.0GHz**"
F. When prompted, enter the Password key:
"**loopcommwifi**"

Wi-Fi Protected Setup (One-Touch Setup or Push Button Configuration)

If your Wi-Fi device has WPS one-touch setup, you can use it to connect to the High Power Router:

- Hold down the WPS button on the High Power Router (back panel) for 3 seconds. The WPS LED will begin to blink.
- As it blinks, push the WPS button on your wireless adapter or enable WPS with the provided software for your wireless adapter. WPS will automatically configure the connection settings for your wireless adapter to connect to the High Power Router.

Setting a Login and Password

The High Power Router has a default login and password to access the web menu:

LOGIN: admin
PASSWORD: admin

This login/password is NOT the wireless network key used to connect to your wireless network.

It is strongly recommended that you change these settings and select your own personal login and password. The Password menu can be accessed through the web menu under **More Settings > Management > Password** on the left side of the web menu.

If you forget your login and password, you will need to reset the High Power Router back to default settings and use the default login and password (login: admin, password: admin) to access the web menu. View the instructions below on how to reset your High Power Router back to default settings.

Using the Features on the High Power Router

The High Power Router is equipped with many powerful security features which can be accessed through the web menu under **Smart Features**, **Firewall Settings** and **Quality of Service** on the left side of the web menu:

More Settings		Wireless Access Scheduling Control when your Wi-Fi is on/off Location: 2.4 or 5.0GHz Wi-Fi Settings > Access Schedule
5.0GHz Wi-Fi Settings		User Access Control (Mac/IP) Restrict network access to specific users Location: Smart Features > User Access
2.4GHz Wi-Fi Settings		Wireless Coverage Control Adjust the distance of your wireless network Location: 2.4 or 5.0GHz Wi-Fi Settings > Wireless Coverage
Network Settings		Block Websites Prevent access to specific websites Location: Smart Features > Block Websites
Smart Features		Firewall Settings Protect your network from outside intruders Location: Firewall Settings
Block Websites		Quality of Service (Prioritize Bandwidth) Manage your network bandwidth Location: Quality of Service
User Access (MAC)		
User Access (IP)		
USB Storage		
Firewall Settings		
Quality of Service		
Routing Setup		
Management		

Web Menu (Left Side)

If you are unfamiliar or want more information on how to set up Smart Features, Firewall Settings, Quality of Service, please refer to the User's Guide on the included CD.

How to Share USB Storage Devices

- Connect a USB storage device to the USB port on the back panel.
- Log onto the web menu at **http://setup.loopcomm.com** and click the **USB Storage** tab.
- Follow the instructions for configuring the settings to share the USB storage device.

How to Reset the High Power Router to Default Settings

There are two options to reset the High Power Router back to factory default settings:

- Access the Reset button through the web menu under **More Settings > Management > Save/Reload Settings** on the left side of the web menu. Select the **Reset Settings to Default**.
- Access the physical Reset button on the back panel of the High Power Router: Hold down the Reset button for five to ten (5-10) seconds. You may need to use a pen tip or pin to access the button. Pressing the Reset Button for less than five (5) seconds will simply reboot the High Power Router while saving your existing settings.

Troubleshooting Tips

PROBLEM:	I entered setup.loopcomm.com and it failed to open the Location Menu.
SOLUTIONS:	<ol style="list-style-type: none"> Make sure your computer is connected to the High Power Router using the included Ethernet cable. Ensure that the power on the High Power Router is on. Check that your computer IS NOT connected to any wireless networks. If it is, disable your Wi-Fi connection and disconnect from all wireless networks. Reboot the router and try again. Close your current web browser and reopen it. Use Google Chrome, Internet Explorer (8.0 and up), or Safari. Open your web browser and enter 192.168.3.1 into the web address bar. Reset the High Power Router to default settings by holding the Reset Button (located on the back panel) for ten (10) seconds and try again. If you still cannot access the menu, disconnect the Ethernet cable and connect wirelessly to the High Power Router. Open your web browser to setup.loopcomm.com.
PROBLEM:	I am having problems with features on the Web Menu. When clicking buttons, it does not register my action.
SOLUTION:	<ol style="list-style-type: none"> Check that you are using a supported web browser: Google Chrome, Internet Explorer (8.0 and up) and Safari. If you are using an unsupported web browser, such as Firefox, please change to one of the supported web browsers and try again.
PROBLEM:	I have a DSL connection and I am not able to access the Internet through the High Power Router.
SOLUTION:	<ol style="list-style-type: none"> Your Internet provider may require that you enter your Smart Setup Wizard to access the Internet. To enter your information, go to Manual Configuration from the Smart Setup Wizard and access the PPPoE menu from the dropdown menu. Enter the required login information for your Internet provider.
PROBLEM:	The Smart Setup Wizard could not automatically configure my Internet connection.
SOLUTIONS:	<ol style="list-style-type: none"> Reset your modem by holding down the reset button located on the back of the modem for approximately ten (10) seconds. Try again. Reboot the High Power Router by unplugging the power adapter and plugging it back in. Static IP: Your Internet connection may require a static IP setting. Check with your ISP to obtain the IP settings. DSL Connection: Your Internet connection may require login information. If you are using PPPoE mode, you will need to manually configure your Internet connection settings and obtain your username and password. Cable Modem: Your Internet connection may require you to clone your MAC address. Go to More Settings > IP Settings > Internet Network (WAN) and select Automatic/Dynamic (DHCP) from the dropdown menu. Clone your PC's MAC address under the DNS settings.
PROBLEM:	I am not getting maximum signal strength on my wireless signal display when connecting to the High Power Router.
SOLUTIONS:	<ol style="list-style-type: none"> Step back at least 10 feet from the High Power Router and check your signal again. The High Power Router emits high power, long range Wi-Fi signals that may confuse your wireless adapter readout reading at close range. The speed and signal are at 100%, however, your wireless adapter readout may not be displaying correctly. Change the wireless channel on the High Power Router and try again. There may be wireless interference in your installation environment.
PROBLEM:	My computer is getting an IP address of 169.254.x.x and/or Windows networking says I have "Limited or no Connectivity."
SOLUTIONS:	<ol style="list-style-type: none"> Make sure the High Power Router is powered on. Check that your computer's network adapter is enabled and is set to "Obtain IP Address Automatically" Restart your computer and try again. You may have a faulty network port. Try connecting to the High Power Router from another computer or using the wireless connection on your computer, if possible.
PROBLEM:	I cannot find the 5.0GHz network when scanning from my computer
SOLUTION:	<ol style="list-style-type: none"> Your computer may have a single band, 2.4GHz only capable network adapter.
